

You are unique and so is your IBS

Identify food(s)
that may trigger
your IBS symptoms

Ask your doctor about
inFoods® IBS today

Different from other food sensitivity tests, inFoods® IBS utilizes a patented & clinically tested approach to detect IBS-specific trigger foods

In a clinical study at the nation's leading medical centers (Mayo Clinic, Harvard, University of Michigan, University of Texas), when IBS patients stopped eating the positive foods identified by inFoods® IBS, many experienced **significant improvement in their IBS symptoms** including pain, bloating and bowel movement urgency.

Ask your doctor about inFoods® IBS today

Powered by Ethos Laboratories, a CLIA and CAP-accredited high-complexity lab. inFoods® IBS is an immunoassay-based Laboratory Developed Test (LDT) designed for the determination of food-specific IgG antibodies in serum that may cause or trigger symptoms in IBS patients. Discuss the test results and any treatment plans with your healthcare provider.
